

Bug #	Description	Location of bug	Steps to recreate	Root cause
1	The first get line grabs nothing. This can cause the creation of an empty party and/or an empty Candidate	In the beginning of Election::run(), when we are inputting in the numSeats, numBallots, NumCandidate sOrParties, right after that, when we do a getline, the line is empty	Simply remove the getline(file, line); before each of the	Seems like the file >> variable grabs non empty strings, so it is possible that it misses a space and that is the value of the getline();
2	No GUI	Start of program	Run program	No library + TA said it is not necessary.
3	Code output not very clean	When running all of the programs, in the end, there are some unnecessary information being outputted to the terminal	Run program and plug in information to run election	Testing while writing code, but never cleaned up
